

Oakland is becoming a city where bicycling is fully integrated into daily life, providing transportation and recreation that are both safe and convenient. This free map depicts City-designated bikeways plus proposed bikeways that may provide useful connections. However, individuals must determine their own skill levels and physical abilities. Know the rules of the road. Take a bike safety class. Wear a helmet. Expect potholes. Be visible at night. Give respect, get respect, and ***have fun!***

Bikeways

This map depicts six types of bikeways, each with specific characteristics:

Bike paths provide a paved right-of-way that is completely separated from the street. They are typically shared with pedestrians and often called mixed-use paths.

Separated bike lanes use parked cars, raised curbs, or other vertical elements to separate bicyclists from vehicular traffic.

Bike lanes are striped on streets and designated specifically for bicycle travel. Oakland is adding buffers where feasible to give bicyclists more space between moving traffic and parked cars.

Bike boulevards are routes on residential streets that prioritize through trips for bicyclists. They include pavement markings, wayfinding signs, and traffic-calming elements.

Bike routes are marked with signs and/or pavement markings, and may have bicyclists sharing lanes with drivers on busier streets.

Wayfinding

This map features 150+ destinations being supported on Oakland's bicycle guide signs. These destinations include downtown, adjoining cities, transit stations, commercial districts, parks and recreation centers, landmarks, colleges, hospitals, and high schools. The signs follow the general conventions of highway guide signs to communicate information in a clear, consistent, and space-efficient format. For more information, see www.oaklandbikes.info/design.
