1 Overview

This document focuses on data exchange APIs for the Transit data. For a complete overview of 511 Data Exchange, please refer to Open 511 Data Exchange Specifications – Overview document. The overview document covers:

- General information about 511 Data Exchange
- Different protocols and data feeds available through Open 511 APIs
- Standard Discovery API specifications.
- Encodings and Protocols along with reference to standard documentation.
- Technical Guidelines

It is highly recommended that all users of Open 511 Data Exchange have reviewed the information in the Overview document.
2  Transit APIs

The NeTEx data structures wrapped within the SIRI framework has been adopted for dynamic exchange of Transit service configuration and schedules. Open511 however recommends using HTTP Get method for requests instead of using HTTP Post, as specified by the NeTEx/SIRI standards. The SIRI framework has also been adopted for dynamic exchange of real-time transit data (stop monitoring and vehicle monitoring). GTFS+ standard has been adopted for bulk exchange of static transit configuration data, while GTFS-RT has been adopted for bulk exchange of real-time transit data (service alerts, trip updates and vehicle positions).

The data communication architecture for San Francisco Bay Area 511 is depicted in Figure 1 below.

All NeTEx responses shall be enclosed within the SIRI ServiceDelivery structure as shown below.

2.1 API: Operator

Operator within a jurisdiction represents a company providing public transport services. Consumers can request a list of all the operators within the jurisdiction or they can use additional filters such as operator code/id to restrict the results as per their needs and use case.

Below is a message structure of dataObjects for Organisations contained within a NeTEx ResourceFrame. Organisations are a collection of the Operator resource.

</tr>
</tbody>
</table>
Parameters and Filters

Parameters and filters supported with the request are shown in the table below. The transit operator response for XML is shown in Appendix A Section A.1.1. The transit operator response for JSON is shown in Appendix B Section B.1.1.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Mandatory/Optional</th>

<tbody>
<tr>
<td>Format</td>
<td>Optional</td>
<td>The response format (json/xml) desired. If none specified, then default response would be JSON.</td>
</tr>
<tr>

<td>Optional</td>
<td>If multiple languages are supported, this can be used to request data in desired language. If the jurisdiction doesn’t support the response in requested language, response could be in default language selected by jurisdiction.</td>
</tr>
<tr>
<td>Operator_id</td>
<td>Optional</td>
<td>The operator_id parameter supports filtering based on a particular operator id/code</td>
</tr>
<tr>
<td>api_key</td>
<td>Mandatory</td>
<td>Unique key assigned to a user after they signup for Open511.</td>
</tr>
</tbody>
</table>

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual Operator resource cannot be located). For e.g., http://api.511.org/transit/Operators?operator_id=1345&api_key={your-key}&format=json

2.2 API: Line

Lines are routes covered by transit operators within the jurisdiction. Consumers can request list of all the routes within an operator or they can use additional filters like line id to restrict the results as per their needs and use case.

Below is a message structure of dataObjects for lines contained within a NeTEx ServiceFrame. Lines are a collection of the Line (Route) resource.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
The line structure is the main element of the Lines collection. It represents a route generally known to the public by a name or a number.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>

</tr>
</tbody>
</table>

Parameters and Filters

Parameters and Filters supported with the request are shown in the table below. The transit line response for XML is shown in Appendix A Section A.1.2. The transit line response for JSON is shown in Appendix B Section B.1.2.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Mandatory/Optional</th>
<th>Description</th>

</tr>
<tr>
<td>Operator_id</td>
<td>Mandatory</td>
<td>The operator_id parameter limits the search for lines within a particular operator id/code</td>
</tr>
<tr>
<td>Line_id</td>
<td>Optional</td>
<td>The line_id parameter supports filtering based on a particular line</td>
</tr>
</tbody>
</table>
### Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- **500** - Internal Server Error (System has issues processing your request)
- **401** – Unauthorized (Invalid API key)
- **404** – Not found (If an individual line resource cannot be located). For e.g. http://api.511.org/transit/lines?api_key={your-key}&operator_id=1345

### 2.3 API: Stop

Stop or ScheduledStopPoint is a location where passengers can board or alight from vehicles. Consumers can request list of all the stops serviced by an agency/operator within the jurisdiction. Stop groupings or StopAreas are also returned when specifically requested using the include_stop_areas parameter.

Below is a message structure of dataObjects for stops contained within a NeTEx ServiceFrame. ScheduledStopPoints are a collection of the ScheduledStopPoint (Stop) resource.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ServiceFrame</td>
<td>NeTEx frame</td>
<td>Mandatory</td>
<td>NeTEx container frame for ScheduledStopPoints.</td>
</tr>
<tr>
<td>— scheduledStopPoints</td>
<td>Collection of ScheduledStopPoints</td>
<td>Mandatory</td>
<td>A collection of ScheduledStopPoint elements. Can contain multiple ScheduledStopPoint elements, at least one occurrence is mandatory.</td>
</tr>
<tr>
<td>— stopAreas</td>
<td>Collection of Stop Areas</td>
<td>Optional</td>
<td>A collection of StopArea elements. Stop Areas group stops within an operator. A hierarchy of stop groups could also be provided. The stopAreas are returned only when specifically requested using the include_stop_areas parameter.</td>
</tr>
</tbody>
</table>

#### ScheduledStopPoint structure

The ScheduledStopPoint structure is the main element of the ScheduledStopPoints collection. It represents a location where passengers can board or alight from vehicles.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id (Attribute)</td>
<td>Free Text</td>
<td>Mandatory</td>
<td>Unique identifier of the stop.</td>
</tr>
<tr>
<td>Extensions</td>
<td>Container</td>
<td>Optional</td>
<td>Container for extensions</td>
</tr>
</tbody>
</table>
—LocationType | Int | Optional | Location Type of the stop. Conforms to location_type in GTFS specifications for stops.txt
—PlatformCode | Text | Optional | Platform identifier for a platform stop. Conforms to platform_code in GTFS specifications for stops.txt
—ParentStation | Text | Optional | Contains the Id of the parent station.
Name | Free Text | Optional | Name of the stop.
Location | Container | Optional | Location of the stop
—Longitude | Float | Optional | Longitude of stop using WGS84 projection
—Latitude | Float | Optional | Latitude of stop using WGS84 projection
Url | Text | Optional | URL of a web page about the location/stop.
StopType | Enum | Optional | Indicates type of stop (Bus, Train, Ferry, etc.)

**StopArea structure**

The StopArea structure is the main element of the stopAreas collection. It represents a grouping of stops within or across multiple operators.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id (Attribute)</td>
<td>Free Text</td>
<td>Mandatory</td>
<td>Unique identifier of the stop area.</td>
</tr>
<tr>
<td>Name</td>
<td>Free Text</td>
<td>Optional</td>
<td>Name of the stop group (parent stop).</td>
</tr>
<tr>
<td>Members</td>
<td>Container</td>
<td>Optional</td>
<td>Container of stops that belong to the group</td>
</tr>
<tr>
<td>ScheduledStopPointRef</td>
<td>Reference ID</td>
<td>Optional</td>
<td>ID of the ScheduledStopPoint (within the ‘ref’ attribute)</td>
</tr>
<tr>
<td>ParentStopAreaRef</td>
<td>Reference ID</td>
<td>Optional</td>
<td>Id of the parent stop. Used to build a hierarchy of stop areas. For example, MUNI stops at Embarcadero could be a StopArea 1; ferry stops at Embarcadero could be StopArea 2. Stop Area 3 could be a parent stop area which comprises of all regional transit stops at Embarcadero. Stop Area 3 is then the ParentStopArea for StopArea 1 and 2.</td>
</tr>
</tbody>
</table>

**Sample request endpoint for stops**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Parameters and Filters**
Parameters and Filters supported with the request are shown in the table below. The transit stop response for XML is shown in Appendix A Section A.1.3. The transit stop response for JSON is shown in Appendix B Section B.1.3.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>

</tr>
<tr>
<td>Line_id</td>
<td>Optional</td>
<td>The line_id parameter supports filtering based on a particular route. The line_id should correspond to the id attribute of a Line returned by the Line API.</td>
</tr>
<tr>
<td>Direction_id</td>
<td>Optional</td>
<td>The direction_id parameter supports filtering based on a particular route and direction. This parameter has to be provided along with the line_id parameter. The direction_id should correspond to the id attribute of a Direction returned by the Pattern API for the operator and route.</td>
</tr>
<tr>
<td>Pattern_id</td>
<td>Optional</td>
<td>The pattern_id parameter supports filtering based on a particular pattern. The pattern_id should correspond to the id attribute of a ServiceJourneyPattern returned by the Pattern API.</td>
</tr>
</tbody>
</table>

**Possible Errors**

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual stop resource cannot be located). For e.g. http://api.511.org/transit/stops?api_key={your-key}&operator_id=1345

**2.4 API: StopPlace**

StopPlace is a named place or the physical stop where public transport may be accessed. Consumers can request list of all the stop places by operator code or they can use additional filters such as stop id to restrict the results as per their needs and use case. For a given stop, the physical representation of the stop (StopPlace) and the representation of the stop as a point in the timetable (ScheduledStopPoint) will use the same stop identifier (id).
Below is a message structure of dataObjects for lines contained within a NeTEx ServiceFrame. StopPlaces is a collection of the StopPlace resource.

#### Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual StopPlace resource cannot be identified)

### 2.5 API: Pattern

Pattern is an ordered list of stop points and time points for a Line, it describes a pattern followed by the public transport vehicle. A pattern may pass through the same stoppoint more than once. A Line may consist of more than one pattern.

Below is a message structure of dataObjects for Pattern contained within a NeTEx ServiceFrame.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/ Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ServiceFrame</td>
<td>NeTEx frame</td>

</tr>
<tr>
<td>—journeyPatterns</td>
<td>Collection of ServiceJourney Pattern</td>
<td>Mandatory</td>
<td>A collection of ServiceJourneyPattern elements. Can contain multiple ServiceJourneyPattern elements, at least one occurrence is mandatory.</td>
</tr>
</tbody>
</table>
The Direction structure is the main element of the directions collection. It is a classification for the general orientation of a pattern within a Line.

<table>

Operator_id | Mandatory | The operator_id parameter limits the search for lines within a particular operator id/code.
Pattern_id | Optional | The pattern_id parameter supports filtering based on a particular Pattern id.
Line_id | Mandatory | The line_id parameter limits the search for patterns within a particular line id (All patterns for specified line_id will be returned).
api_key | Mandatory | Unique key assigned to a user after they signup for Open511.

The transit pattern response for XML is shown in Appendix A Section A.1.5. The transit pattern response for JSON is shown in Appendix B Section B.1.5.

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual Journey pattern resource cannot be identified)

2.6 API: Timetable

Timetable represents a timetable for a given Line, Direction and DayType. It also contains supporting elements referenced by the timetable such as the Route (ordered list of timepoints for which times are provided), day type (service type) and optionally day assignments (assignment of a daytype to each day within the service period). When the IncludeSpecialService parameter is set to true, this API returns all the holiday services (if any) for specified Line. When the IncludeSpecialService parameter is set to false or the IncludeSpecialService parameter is not provided, it returns all the regular timetables for the specified Line. When the ExceptionDate parameter is set to a service exception date (one of the dates returned by the Holiday API for the same agency), the API returns the exception/holiday timetable for the specified line and date. If no timetables are returned, it shall be assumed that the agency is not providing any service for the line on the given exception date.

Below is a message structure of dataObjects for Timetable within a NeTEx CompositeFrame.

</tbody>
</table>

Route Structure

The Route structure is the main element of the routes collection. At least one Route is mandatory within the routes. Route represents an ordered list of timepoint stops for which times are provided in the timetable.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>

</tbody>
</table>
### DirectionRef

- **ID** | Mandatory
- **Mandatory**
- Reference to the Direction, ref attribute contains identifier to the Direction

### pointsInSequence

- **Container** | Mandatory
- **Mandatory**
- Container for ordered set of time points making up the Route. It should contain at least 2 PointOnRoute

### PointOnRoute

- **Free Text** | Mandatory
- **Mandatory**
- It is the reference to the ordered route points of Route, id attribute contains unique identifier for PointOnRoute

### PointRef

- **ID** | Mandatory
- **Mandatory**
- It is reference scheduled stoppoint representing the timepoint, ref attribute contains identifier to the point

---

**DayType Structure**

The `dayTypes` structure contains the collection of `DayTypes` referenced by the timetables. `DayType` is a type of day characterized by one or more properties which affect public transport operation.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id (Attribute)</td>
<td>Free Text</td>

<td>A container for <code>DaysOfWeek</code> property.</td>
</tr>
<tr>
<td>——PropertyOfDayGroup</td>
<td>Enum</td>
<td>Mandatory</td>
<td>It contains <code>DaysOfWeek</code> logically appended together</td>
</tr>
</tbody>
</table>

**DayTypeAssignment structure**

The `dayTypeAssignments` structure contains the collection of `DayTypeAssignments`, which links every operating day within the service period to a daytype. The service period is defined within the Timetable Frame.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>

<td>The operator_id parameter supports filtering based on a particular operator id/code</td>
</tr>
<tr>
<td><strong>Line_id</strong></td>
<td>Mandatory</td>
<td>The line_id parameter supports filtering based on a particular line id. All timetables for the line are returned</td>
</tr>
<tr>
<td><strong>IncludeDayTypeAssignments</strong></td>
<td>Optional</td>
<td>DayTypeAssignments will be included only if this flag is set to true.</td>
</tr>
<tr>
<td><strong>api_key</strong></td>
<td>Mandatory</td>
<td>Unique key assigned to a user after they signup for Open511.</td>
</tr>
<tr>
<td><strong>IncludeSpecialService</strong></td>
<td>Optional</td>
<td>The timetables for service exceptions for the selected Line are returned (if available) when this parameter is set to ‘true’. </tr>
</tbody>
</table>
When this parameter is set to one of the dates returned by the Holiday API for the same agency, the exception/holiday timetable for the given line and the exception/holiday is returned. When no timetables are returned for an exception date (no TimetableFrame elements), it should be assumed that the agency is not providing any service for the line on the date. The ExceptionDate should be provided in the yyyyMMdd format.

The transit timetable response for XML is shown in Appendix A Section A.1.6. The transit timetable response for JSON is shown in Appendix B Section B.1.6.

**Possible Errors**

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual Holiday resource cannot be identified)

### 2.7 API: Holidays

Holidays is a collection of service exceptions defined by an agency or operator.

Below is a message structure of dataObjects for service exceptions contained within a NeTEx ServiceCalendarFrame.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ServiceCalendarFrame</td>
<td>NeTEx frame</td>
<td>Mandatory</td>
<td>NeTEx container frame for service exceptions and dayTypes.</td>
</tr>
<tr>
<td>— ServiceCalendar</td>
<td>ServiceCalendar</td>
<td>Mandatory</td>
<td>Represents the service period.</td>
</tr>
<tr>
<td>— contentValidityConditions</td>
<td>Collection of AvailabilityCondition</td>
<td>Mandatory</td>
<td>A collection of AvailabilityCondition elements. Can contain multiple AvailabilityCondition elements. Each AvailabilityCondition specifies an exception date/holiday that the agency defines.</td>
</tr>
</tbody>
</table>

**ServiceCalendar structure**

The ServiceCalendar structure represents the service period for the service exceptions.
### Field | Type | Mandatory/Optional | Description
---|---|---|---
id (Attribute) | Free Text | Mandatory | Unique identifier of the ServiceCalendar.  
FromDate | DateTime | Mandatory | Start date of ServiceCalendar (Service Period)  
ToDate | DateTime | Mandatory | End date of ServiceCalendar (Service Period)  

**AvailabilityCondition structure**

The AvailabilityCondition structure is the main element of the contentValidityConditions collection. Every exception/holiday date defined by the agency is provided as an AvailabilityCondition element.

| Field | Type | Mandatory/Optional | Description |
---|---|---|---
id (Attribute) | Free Text | Mandatory | Unique identifier of the AvailabilityCondition.  
Description | Free Text | Optional | Description of the AvailabilityCondition.  
FromDate | DateTime | Mandatory | Start date of AvailabilityCondition (Service Exception)  
ToDate | DateTime | Mandatory | End date of AvailabilityCondition (Service Exception)  

**Sample request endpoint for stops**

**Request Type**

GET  
For e.g.  
http://api.511.org/transit/holidays?api_key={your-key}&operator_id=SF

**Parameters and Filters supported with the request**

| Parameter | Mandatory/Optional | Description |
---|---|---
Format | Optional | The response format (json/xml) desired. If none specified, then default response would be JSON.  
accept_language | Optional | If multiple languages are supported, this can be used to request data in desired language. If the jurisdiction doesn't support the response in requested language, response could be in default language selected by jurisdiction.  
Operator_id | Mandatory | The operator_id parameter supports filtering based on a particular operator id/code.  

api_key | Mandatory | Unique key assigned to a user after they signup for Open511.

The transit Holidays response for XML is shown in Appendix A Section A.1.7. The transit Holidays response for JSON is shown in Appendix B Section B.1.7.

**Possible Errors**

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual Holiday resource cannot be identified)

### 2.8 API: Announcement

Announcement is completely SIRI entity; it is a description of a situation/condition about the public transport. Announcement consists of Situations which is collection of PtSituationElement which contains description of situation/condition, at least one PtSituationElement is mandatory.

A message structure of PtSituationElement for Announcement contained within Situations is shown in Appendix C Section C.1.8.

The transit announcement response for XML is shown in Appendix A Section A.1.8. The transit announcement response for JSON is shown in Appendix B Section B.1.8.
Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- **500** - Internal Server Error (System has issues processing your request)
- **401** – Unauthorized (Invalid API key)
- **404** – Not found (If an individual Announcement resource cannot be identified)

2.9 API: Transit Scheduled Departures for a Stop

SIRI Stop Timetable service provides static/scheduled timetables in the system for a particular stop. A message structure of Transit Scheduled Departures in SIRI ST (Stop Timetable) format which consists of a single **ServiceDelivery** node containing details on scheduled visits to this stop within a departure window is shown in Appendix C Section C.1.9.

Sample request endpoint

<table>
<thead>
<tr>
<th>Request Type</th>
<th>GET</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>EndTime</td>
<td>Optional</td>
<td>The end date parameter allows for requesting departures within a departure window.</td>
</tr>
<tr>
<td>api_key</td>
<td>Mandatory</td>
<td>Unique key assigned to a user after they signup for Open511.</td>
</tr>
</tbody>
</table>

The example response for XML in SIRI ST format is shown in Appendix A Section A.1.9. The example response for JSON in SIRI ST format is shown in Appendix B Section B.1.9.
2.10 API: Real-time predictions at a Stop

Siri Stop Monitoring service provides current and forthcoming vehicles arrivals and departures at a stop.

A message structure of real-time departures which consists of a single ServiceDelivery node containing details on monitored visits to this stop is shown in Appendix C Section C.1.10

Sample request endpoint

<table>
<thead>
<tr>
<th>Request Type</th>
<th>GET</th>
</tr>
</thead>
<tbody>
<tr>
<td>For e.g.</td>
<td><a href="http://api.511.org/transit/StopMonitoring?api_key=%7Byour-key%7D">http://api.511.org/transit/StopMonitoring?api_key={your-key}</a> &amp;agency=AC</td>

<tr>
<td>agency</td>
<td>Mandatory</td>
<td>Agency ID to be monitored (e.g. actransit)</td>
</tr>
<tr>
<td>stopCode</td>
<td>Optional</td>
<td>Numeric stop code for the stop to be monitored. When stop code is not provided, the API will return all available information for all stops. Depending on the amount of data, the response time for the API can be more than 5-7 seconds.</td>
</tr>
</tbody>
</table>

The transit real time departure service delivery mode response for XML is shown in Appendix A Section A.1.10 and for JSON is shown in Appendix B Section B.1.10.

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If a resource cannot be located)
2.11 API: Real-time Vehicle Monitoring
Siri Vehicle monitoring service provides information about current location and expected activities of a particular vehicle. It also provides details for current and subsequent Journey patterns. A message structure for real-time vehicle/trip monitoring which consists of a single ServiceDelivery node containing details on vehicle/trip within an agency that are currently operational and being monitored is shown in Appendix C Section C.1.11.

Sample request endpoint

<table>
<thead>
<tr>
<th>Request Type</th>
<th>GET</th>
</tr>

<td>Mandatory</td>
<td>Agency ID to be monitored (e.g. AC)</td>
</tr>
<tr>
<td>vehicleID</td>
<td>Optional</td>
<td>The unique identifier of the vehicle to be monitored.</td>
</tr>
</tbody>
</table>

The real time vehicle monitoring response for XML in SIRI format is shown in Appendix A Section A.1.11 and for JSON is shown in Appendix B Section B.1.11.

Possible Errors
Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If a resource cannot be located)

2.12 API: Transit Schedule Updates for an agency (Possible Future Implementation)
Siri Production Timetable provides information about the expected operation of a transport network for a specified day.
A message structure of Transit Schedule Updates in SIRI PT (Production Timetable) format which consists of a single ServiceDelivery node containing details on schedule updates for a specific line and direction by an agency is shown in Appendix C Section C.1.12.

Sample request endpoint

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Mandatory/Optional</th>
<th>Description</th>

<td>Optional</td>
<td>Direction (ID) for the route.</td>
</tr>
<tr>
<td>api_key</td>
<td>Mandatory</td>
<td>Unique key assigned to a user after they signup for Open511.</td>
</tr>
</tbody>
</table>

The transit schedule update response for XML is shown in Appendix A Section A.1.12. The transit schedule update response for JSON is shown in Appendix B Section B.1.12.

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If a resource cannot be located)
2.13 API: Transit Addition and Cancellation of Trips by Agency (Possible Future Implementation)

Siri Estimated Timetable service provides details of the operation of the transport network for a period within the current day, detailing real time deviations from the timetables and control actions affecting the Timetable (cancellations, additional Journeys and Detours).

A message structure of Transit Addition and Cancellation of Trips in SIRI ET (Estimated Timetable) format which consists of a single ServiceDelivery node containing details on schedule updates for a specific line and direction by an agency is shown in Appendix C Section C.1.13.

Sample request endpoint

The transit addition and cancellation response for XML is shown in Appendix A Section A.1.13 and for JSON is shown in Appendix B Section B.1.13.

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
• 404 – Not found (If a resource cannot be located)

2.14 API: General Announcements
Siri General Messaging Service provides a structured way to exchange arbitrary informative messages between participants, such as travel news, or operational advice.

A message structure of Service Announcements in SIRI GM (General Message) format which consists of a single ServiceDelivery node containing details on general messages is shown in Appendix C Section C.1.14.

Sample request endpoint

<table>

</tr>
</tbody>
</table>

The transit general messaging service response for XML is shown in Appendix A Section A.1.14 and for JSON is shown in Appendix B Section B.1.14.

Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

• 500 - Internal Server Error (System has issues processing your request)
• 401 – Unauthorized (Invalid API key)
• 404 – Not found (If a resource cannot be located)

2.15 API: GTFS-Realtime Trip Updates

GTFS-realtime trip updates service response format type is based on Protocol Buffers. Section B.1.
Sample request endpoint

<table>

- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If a resource cannot be located)

2.17 GTFS Operator List

GTFS Operator List is the list of operators/agencies that have GTFS dataset available via Open511 APIs

Sample request endpoint

<table>
<thead>
<tr>
<th>Request Type</th>
<th>GET</th>
</tr>
</thead>
<tbody>
<tr>
<td>For e.g.</td>

</tr>
</tbody>
</table>

The transit GTFS Operator response for XML is shown in Appendix A Section A.1.15. The transit GTFS response for JSON is shown in Appendix B Section B.1.15.

### Possible Errors

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual resource cannot be identified)

#### 2.18 GTFS DataFeed download

GTFS datafeed download allows the user to download a zip file containing GTFS dataset for the specified operator/agency

The zip file contains the text files corresponding to the GTFS file formats. It also contains additional files, called the GTFS+ files, that provide information that is not contained in the GTFS files such as the direction names, farezone names, etc. The list of GTFS+ files and their data structures are provided in Appendix D of this document.

When the request is processed successfully, the user will receive a zip file attachment in response to this API.
### Sample request endpoint

</tr>
<tr>
<td>agency</td>
<td>Optional</td>
<td>When Agency/Operator ID are provided, the service alerts are filtered by the agency ID. These IDs could be obtained from operators API endpoint.</td>
</tr>
</tbody>
</table>

**Possible Errors**

Listed below are HTTP status code and message returned for certain common errors:

- 500 - Internal Server Error (System has issues processing your request)
- 401 – Unauthorized (Invalid API key)
- 404 – Not found (If an individual resource cannot be identified)

### 2.20 API: Shapes

Shapes describe the path that a vehicle travels along a trip. Consumers can request the shape for an agency’s trip id. Trip ids can be obtained using the Timetable API.

Below is a message structure of dataObjects for shapes contained within a NeTEx TimetableFrame.

<table>
<thead>
<tr>
<th>Field</th>
<th>Type</th>
<th>Mandatory/Optional</th>
